Before After
Deep acne and scarring significantly improved, pigment and tone evened

Before After
Stretch marks improved and skin tightened around belly button

Before After
Severe burn scarring treated to reduce scarring and even skin quality

FREQUENTLY ASKED QUESTIONS

How soon after treatment can I return to my daily activity?

eDermastamp® treatments are mildly invasive, leaving your skin flushed (looking much like a sunburn) for 24-36 hours. Some clients report tenderness while others report no discomfort whatsoever. Your activity is not hindered in any way but many clients feel more comfortable returning to their daily routine wearing a light mineral-based makeup. If possible, we recommend avoiding makeup for 24 hours after the treatment. Clients report that post-treatment redness diminishes upon subsequent sessions.

Is the eDermastamp® suitable for all skin tones?

Yes, the eDermastamp® is suitable for all skin tones.

How does the eDermastamp® feel?

When our recommended numbing cream is used prior to a eDermastamp® treatment, clients report a feeling similar to exfoliation. Without numbing cream, most clients report that the treatment is uncomfortable.

How many eDermastamp® sessions are recommended?

In general, we recommend 3 treatments, 6 weeks apart. In severe conditions, more treatments may be needed.

eDermaStamp®

eDermaStamp®

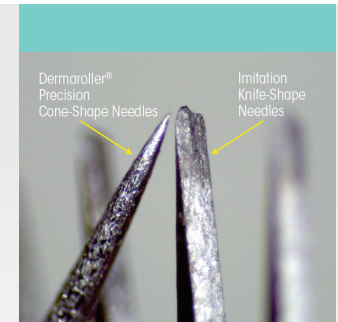

by **Dermaroller®**

Promote skin repair and reduce the appearance of wrinkles, scars, stretch marks and other signs of aging, with eDermaStamp® Collagen Induction Therapy.

- Reduce wrinkles
- Tighten & tone
- Treat scars & stretch marks
- Improve skin texture
- Thicken the dermis

Collagen Induction Therapy micro-needling is perhaps the most successful treatment in combating the common concerns of aging skin. eDermaStamp® micro-needling therapy triggers the body's spontaneous healing process, stimulating cell proliferation and causing the formation of new collagen. This results in a thicker and more supple cellular matrix, and visibly younger looking skin.

Why eDermaStamp®

Licensed by Health Canada

The eDermaStamp® is licensed by Health Canada. There are countless imitation products on the market that are not licensed by Health Canada so we recommend you do your research, to protect your health and safety.

Certified Medical-Grade Equipment

The eDermaStamp® is ISO13485 certified (certified medical device), meeting all standards for medical-grade equipment in manufacturing, materials, sterile packaging and more.

Safe Micro-Needles

The medical-grade micro-needles of the eDermaStamp® are non-traumatic and respect the integrity of the epidermis and dermis. Poorer quality devices have needles that slice through tissue and risk causing traumatic skin, vessel and nerve damage.

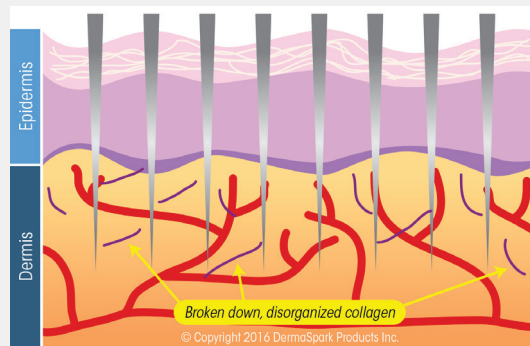

Optimal Needle Count

eDermaStamp® is proven to have the optimal number of needles to ensure safe and effective penetration of the epidermis and dermis. Too many needles will compromise both the safety and comfort of the treatment.

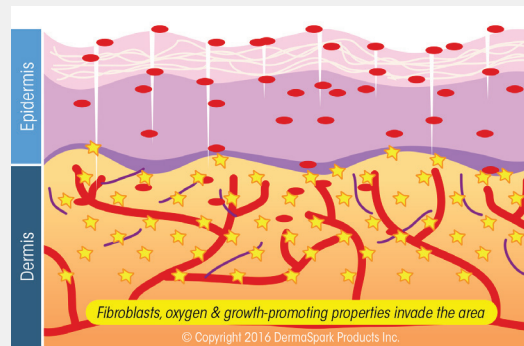

HOW IT WORKS

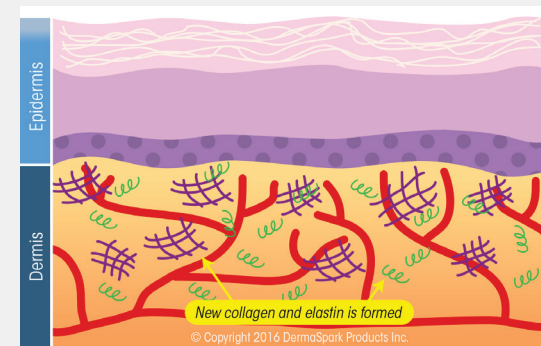

1. Treatment

eDermaStamp®'s surgical-grade micro-needles reach beyond the epidermis into the dermis, causing pin-point bleeding and triggering the body's spontaneous healing response.

2. Healing Cascade

Within minutes, the perforation channels close and the healing cascade starts, invading the area with collagen-producing fibroblasts and growth-promoting properties.

3. Younger Looking Skin

New organized collagen & elastin forms, bolstering from within, while the epidermis becomes thicker and more supple, each time a treatment is performed.
